# Tornado ECR

No 2517 model kit  
 modèle réduit

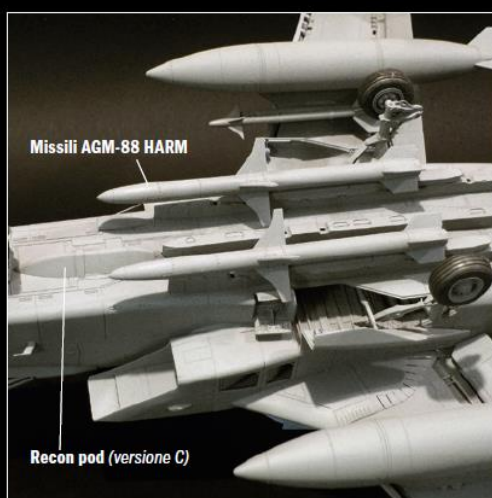

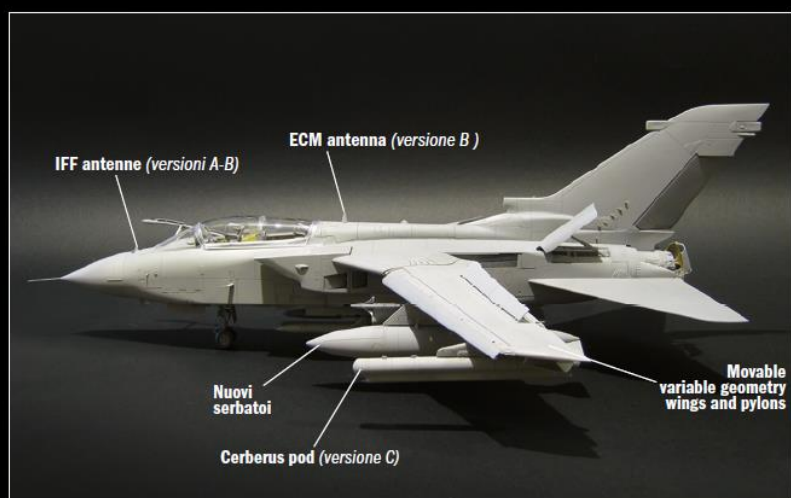

## Caratteristiche del modello

- Più di 350 pezzi
- Dettagli in fotoincisione
- Motore RB.199 estraibile con carrello speciale di supporto
- Alette e flaps retratti o aperte
- Alettoni mobili
- Radome apribile con radar dettagliati all'interno

**NEW PARTS**

- Invertitori di spinta aperti o chiusi
- Freni ad aria aperti o chiusi
- Pneumatici in gomma
- Ali e piloni a geometria variabile
- Copertura in gomma nel punto di rientro delle ali
- Foglio istruzioni a colori
- Super foglio decals per 3 versioni

**1:32**  
 scalascale

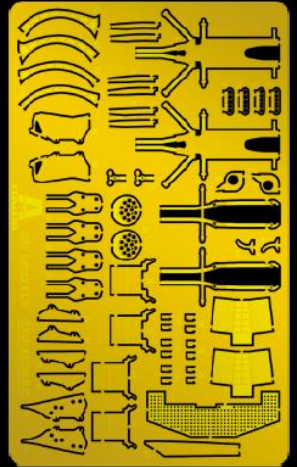

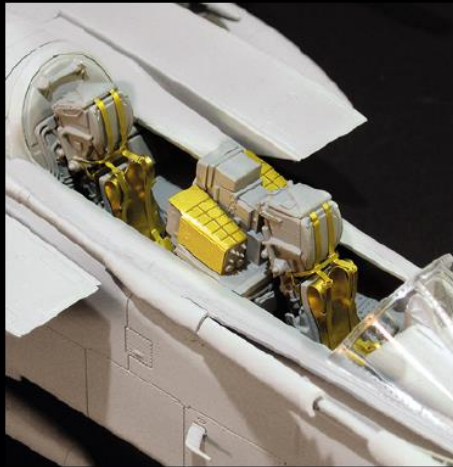

## Profilo Storico Modellistico

Il progetto del Tornado è nato dalla collaborazione di Italia, Germania e Regno Unito per la realizzazione di un aereo da combattimento multiruolo dalle alte prestazioni di volo. Venne così sviluppato un aereo bimotore, con configurazione biposto ed ali a geometria variabile per meglio rispondere al suo ruolo principale: caccia bombardiere supersonico a bassa quota in grado di "seguire" il profilo del terreno. Il Tornado IDS (Interdictor/strike), ideale per le missioni di attacco, è stato il primo ad essere impiegato dai reparti operativi di volo dei tre Paesi che svilupparono il progetto. Dal progetto originario venne realizzata anche la versione ECR (Electronic Combat/ Reconnaissance), impiegata dall'Aeronautica Militare Italiana e dalla Luftwaffe tedesca, equipaggiata per svolgere missioni di soppressione delle difese aeree nemiche (SEAD), guerra elettronica e ricognizione avanzata.
